# CHAPTER 1

---

## Overview

---

|         |  |
|---------|--|
| docs    |  |
| tests   |  |
| package |  |

A simple wrapper around fs to work with flask and switch between local and s3fs

- Free software: MIT license

## 1.1 Installation

```
pip install efs
```

## 1.2 Documentation

<https://python-efs.readthedocs.io/>

## 1.3 Development

To run the all tests run:

|     |
|-----|
| tox |
|-----|

Note, to combine the coverage data from all the tox environments run:

|         |  |
|---------|--|
| Windows | <pre>set PYTEST_ADDOPTS=--cov-append<br/>tox</pre> |
| Other   | <pre>PYTEST_ADDOPTS=--cov-append tox</pre>         |

## CHAPTER 2

---

### Installation

---

At the command line:

```
pip install efs
```

## CHAPTER 3

---

### Usage

---

To use EatFirst fs + flask wrapper in a project:

```
import efs

# There is no need to initialise it because it will always use the current app.
fs = efs.get_filesystem()
fs.upload('a/file.txt', open('/tmp/file.txt', 'rb'))
```

## CHAPTER 4

---

Reference

---

### 4.1 efs

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

### 5.1 Bug reports

When [reporting a bug](#) please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 5.2 Documentation improvements

EatFirst fs + flask wrapper could always use more documentation, whether as part of the official EatFirst fs + flask wrapper docs, in docstrings, or even on the web in blog posts, articles, and such.

### 5.3 Feature requests and feedback

The best way to send feedback is to file an issue at <https://github.com/eatfirst/python-efs/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

## 5.4 Development

To set up *python-efs* for local development:

1. Fork [python-efs](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:your_name_here/python-efs.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you’re done making changes, run all the checks, doc builder and spell checker with `tox` one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .
git commit -m "Your detailed description of your changes."
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

### 5.4.1 Pull Request Guidelines

If you need some code review or feedback while you’re developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run `tox`)<sup>1</sup>.
2. Update documentation when there’s new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

### 5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- py.test -k test_myfeature
```

To run all the test environments in *parallel* (you need to `pip install detox`):

```
detox
```

---

<sup>1</sup> If you don’t have all the necessary python versions available locally you can rely on Travis - it will [run the tests](#) for each change you add in the pull request.  
It will be slower though ...

## CHAPTER 6

---

### Authors

---

- EatFirst - <https://github.com/eatfirst/python-efs>

### 7.1 0.2.0 (2018-08-22)

- Upgrade fs to version 2 [#4](#).

### 7.2 0.1.1 (2017-10-16)

- Add `get_filesystem` to efs root's package [#2](#).

### 7.3 0.1.0 (2017-10-13)

- First release on PyPI.

## CHAPTER 8

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
